

# EMTrack

## Patient, People, and Pet Tracking

### Overview

EMTrack is a web-based people, patient, pet and property tracking solution that provides a common operating picture to transform emergency management collaboration in situations such as mass casualty incidents, evacuations, sporting competitions, music festivals and vaccination clinics. EMTrack fully adheres with Health Information Technology for Economic and Clinical Health (HITECH) Act and HIPAA compliance protocols.

### Target Sectors

- Healthcare & Public Sectors

### Key Benefits

- Improves incident to care coordination
- Enables faster care delivery
- Minimizes patient diversions
- Supports family reunification
- Multi-functional Use
- Supports a common operating picture

### Organizations

- Emergency Medical Services
- State Hospital Associations
- Public Health Departments

### Use Cases

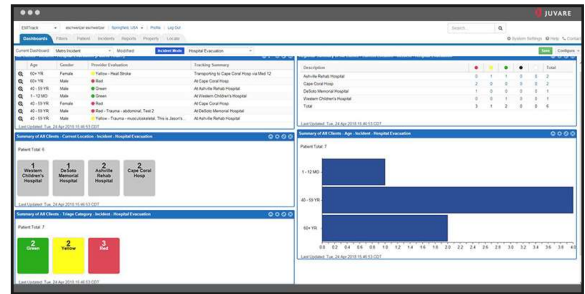

- Triage
- Patient tracking through entire cycle
- Evacuations
- Earthquakes
- Marathons
- Concerts
- Festivals
- Sporting Events
- Mass casualty incidents
- Vaccinations
- Stroke/Trauma alerting

# EMTrack

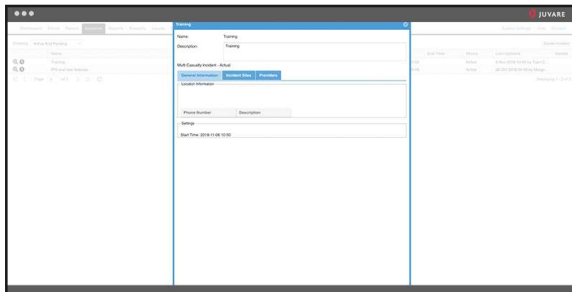

## Proven and Flexible Tracking

Over 3,500 facilities and 4,300 mobile providers rely on EMTrack. Capture data online, offline and via mobile across multiple organizations, for highly effective tracking of patients, evacuees and general population movement during a critical event, crisis, large scale public event or daily patient transports. EMTrack integrates easily with related technologies and operates optimally in austere environments in real time.

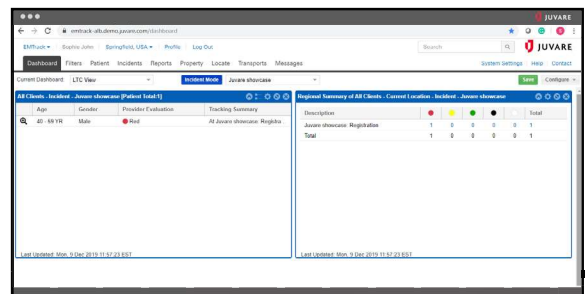

## Inbound Patient Coordination

Notify hospitals in advance to prepare for high-risk patients, saving time and lives, with the EMTrack Incoming Patient Notification. Hospitals can proactively alert appropriate staff, reserve treatment rooms and mobilize resources.

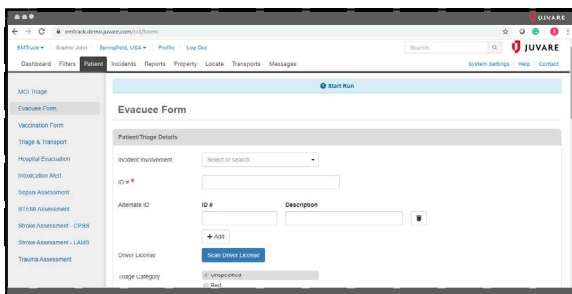

## Patient Tracking and Triage

Use portable devices, including mobile phones, to rapidly scan-in patients on-scene and track through triage, treatment, transfer, and hospital reception. Notify EOC about the number and acuity of patients on-scene, dispatch about the number of patients in need of transport, and hospitals about patients dispatched to their facility.

## Evacuations of All Kinds

Ensure real-time data capture throughout all aspects of an evacuation process, including transportation, sheltering, and temporary housing, with EMTrack web-based and mobile applications data collection options.

## Family Reunification

Use the EMTrack search and filter tools to rapidly identify patient and evacuee locations and support family reunification operations.
